

AMENDMENTS**In the Specification:**

On page 1, please replace the paragraph beginning at line 20 with the following:

B1
For future military and commercial applications there may be a need for a radio capable of operating over a wide band of frequencies. This would ordinarily involve switching or multiplexing the received signal to one of N channels for subsequent gain control and mixing operations. However, it would be difficult for a single radio frequency (RF) switch to cover either the ~~RF or IF~~ RF or IF frequency range.
